Ringing in Ears, Ear/Jaw Popping, Sensitive Teeth- Can All Point to TMJ Disorder

Lise Armstrong

I have suffered from headaches for several years. Along with these headaches, I have had ringing in my ears, popping ear/jaw pain, lightheadedness and sensitive teeth. The headache episodes sometime lasted two or three days, effecting my sleep and ability to think clearly. Approximately two years ago, the headaches got much worse and increased in frequency. The pain became so intense that I had to take a daily prescription to function. Last year I came to Arkansas Dental Health and TMJ Therapy Center and was treated by Dr. Beavers. I was fitted with a splint and within a week of wearing it, my headaches were gone. I am so very grateful for the treatment I received at Arkansas Dental Health and TMJ Therapy Center.
